

# Transforming pancreatic care through innovation

## Sherron Berg Early Detection Pancreatic Cancer Program

At Piedmont Oncology, we bring more cures to Georgians with pancreatic cancer through increased screening, community awareness, and access to research. As the first and only early detection clinic in Georgia dedicated to pancreatic cancer, we work to identify high-risk patients and families, so we can detect cancer earlier.

### Who May Benefit

- Individuals with a family history of pancreatic cancer, especially in a close relative or multiple family members
- Carriers of a gene mutation linked to an increased risk for pancreatic cancer, such as ATM, BRCA1/2, CDKN2A, PALB2, or Lynch syndrome
- Individuals concerned about their risk of developing pancreatic cancer

### What We Offer

- Pancreatic cancer risk assessment and evaluation by our dedicated, specialized team
- Genetic counseling and testing, if indicated
- Personalized pancreatic cancer screening and risk-reduction plan, which may include imaging, bloodwork, and/or lifestyle modifications
- Opportunity to be involved in research, including early detection blood banking studies for select patients

### Our Team

- **Melissa Pietro, PA-C** - Advanced Practice Provider
- **Julia Lanza, MS, CGC** - Genetic Counselor
- **Takiyyah Hamilton, MPH** - Clinical Research Coordinator
- **Andrew Page, MD, FACS** - Sherron Berg Endowed Medical Director /Surgical Oncologist

For more information or to schedule an appointment, call **404.605.4208**

Telehealth or In-person visits are available. A referral is not required.
